

The Great Northumberland Forest is a plan to establish millions of trees, creating more wooded landscapes across the county by 2030.

More trees will help tackle the big challenges facing society such as climate change and biodiversity decline, while promoting health and wellbeing and supporting a thriving local economy.

What we do

We can help with advice, where to find more information and how to access funding. Our free support includes discussing and assessing options and opportunities, and how they fit with your objectives.

Approval

Depending on the scale and location of your project, some regulatory approvals may be required. We can work with you and the relevant authorities to help gain the permissions needed for your project to become a reality.

Funding

There is currently a range of funding options available to support tree and wood planting. We can help match funding opportunities that best suit your needs, and help with application writing.

Contact us
